Monthly refresh scope summary

Matakupan Labs · matakupanlabs.com

Thank you for subscribing to the monthly refresh. This summary explains the coverage, what we need from you, and the delivery schedule.

Other packages: **Pilot** 5,000 rows, 7 business days, 1 revision. **Full package** 25,000 rows, 14 business days, 2 revisions.

1. Subscription scope

ITEM	DETAIL
Source	Same source and schema as the initial intake
Rows	5,000 rows per month
Region	Same as the initial intake
Schedule	Delivery at the start of each month
Term	No minimum, stop before the next cycle
Bundle	USD 249 for 3 months, optional
Format	CSV, Excel (XLSX), or JSON
Revision	1 revision per cycle for wrong rows or columns
Price	USD 99 per month, invoiced by PayPal or bank transfer in USD; transfer fees are yours unless you pay by PayPal

2. What we need from you

1. **Source and schema.** If this is your first purchase, complete the intake with the source URL and the column list.
2. **Delivery email.** The same address used for the purchase, or another address you specify in the intake.
3. **Monthly confirmation.** Reply to the reminder email if the coverage or city list changes.
4. **Change notes.** New filters, added columns, or anything to avoid.

Intake form: the link is emailed after the first payment. Complete it within 7 days. For later months we reuse the agreed schema.

3. Monthly workflow

1. You pay the subscription and receive an email with the invoice and the intake form.
2. We lock the source, schema, and region.
3. At the start of each month, we collect and clean the latest 5,000 rows.
4. The file is emailed within 3 business days after the data becomes available.
5. You review. One revision per cycle is included within scope.

4. Limits and ethics

- Public data only. No login pages, no personal data, no captcha bypass.
- One source and one schema. Changes to the source or schema outside the scope are a new project.
- No minimum term. Stop with 7 days notice before the next cycle.
- If a source blocks access or changes so the data cannot be collected, we offer a replacement source or a refund for the cycles not yet delivered.

- Subscription output is for the buyer. It may be used inside client deliverables, but not resold as a raw data product.
